Highlights

- The HHLA was built to produce ultra-low-sulfur diesel for non-road use.
- Twin projects executed by Jacobs Engineering in Baton Rouge, Louisiana and Baytown, Texas.
- The overall cost of constructing the unit was \$400 million.
- APP's products were chosen by both ExxonMobil and Jacobs Engineering as the sole source for composite pipe supports on the project.
- APP performed on-site installation training for the multiple contractors involved throughout the length of the project.
- Our easy to install wear pads and pipe shoes saved Exxon hundreds of thousands in installation costs.
